Subject: Fw: Cabo Rojo limited VI sampling

Jeff,

Let me know what's your cost estimate for collecting 14 samples.

Rough estimate of 14 samples.

4 samples in Ana Maria HeadStart (HS)

2 sub-slabs ports at two locations with high PCE detections as of Mar 2012 and 2 indoor air samples for a total of 4 samples.

You will have to drill sampling port at the following sites:

4 samples in Santa Rita HS

2 sub-slabs and 1 indoor air and 1 outdoor air sample. The Santa Rita HS consist of a 1 classroom with 3,034 sq ft. It was described as the size of 2 classrooms at the Ana Maria HS.

6 samples at a new location "Rebekah Colberg Stadium"

3 sub slab, 2 indoor air and 1 outdoor air sample) at the new location Rebeka Colberg Stadium. This building has 2,205 sq ft.

thanks
